Semantic Web Technologies
Introduction to Student Projects

Heiko Paulheim, André Melo
Student Projects

• Goals
  – Gain more practical experience with the Semantic Web
  – Become familiar with existing datasets
  – Understand possibilities and limitations of Semantic Web datasets

• Expectation
  – Choose one or more (preferably more) Semantic Web datasets
  – Build an interesting application with it
Interesting Applications

• Just a few possible examples
  – Quiz applications
  – Mobile apps with local information
  – Expert systems for a special domain
  – ...

...
Procedure

• Teams of two students
  1. realize a semantic web project
  2. write 10 to 12 page summary of the project and the methods employed in the project
  3. present the project results to the other students

• Final mark for the course
  ■ 50 % written exam
  ■ 30 % written summary about the project
  ■ 20 % project presentation
Requirements

• The project you develop should
  – solve a real world task for end users
  – use one or more semantic web datasets
  – involve some processing beyond mere display of the data
Project Outlines

- 2-3 pages (sharp!) without title and TOC pages, DWS master thesis layout
- due Wednesday, October 21st, 23:59
- send by eMail to André and Heiko
- answer the following questions:
  - What is the goal of the application you are going to build?
  - What are the example results you expect?
  - What datasets are you planning to use?
  - What techniques are you going to use?
  - How do you plan to evaluate your results?
Coaching Sessions

• We will give you tips and answer questions concerning your project

• Please send us an email that you want to attend a coaching session
  – until Monday night
  – including the questions that you like to discuss

• We will assign you a time slot afterwards and inform you about the slot via email
Project Reports

• 10-12 pages (sharp!) without title and toc pages

• due Wednesday, December 9th, 23:59

• send by email to André and Heiko

• describe your solution including the steps to get there:
  1. Application domain and goals
  2. Datasets used
  3. Techniques used
  4. Example results
  5. Known limitations
  6. Lessons learned

• Requirements
  ■ You must use the DWS master thesis layout
  ■ Please cite sources properly. Preferred citation style [Author, year]
Project Reports

- Application domain and goals
  - Which users are targeted?
  - Which user problems are solved?
  - Which user information needs are addressed?

- Datasets used
  - Which datasets does the application use?
  - How are they accessed (SPARQL, local)?
  - How do you combine information from different datasets?

- Techniques used, e.g.
  - Reasoning
  - Search
  - external services
Project Reports

• Example results
  – What outcomes does the application provide?
  – How is are some user queries answered?

• Known limitations
  – In which domains does the application not work?
  – Are there queries which cannot be answered?
  – Why?
  – How could you overcome those limitations, given more time?

• Lessons learned
  – Which challenges did you face?
  – What were the biggest obstacles?
  – What would you do differently next time?
Deadlines at a Glance

• Submission of project work proposal
  – Wednesday, October 21\textsuperscript{st}, 23:59

• Submission of final project work report
  – Wednesday, December 9\textsuperscript{th}, 23:59

• Final presentation
  – Friday, December 11\textsuperscript{th} & 18\textsuperscript{th} (if required)

• Final exam
  – Thursday, December 17\textsuperscript{th}
